Subject – Data Science, DS-55,56

Built for teachers

Mark and update attendance in a few clicks

Central data store

Records for all departments kept in PostgreSQL

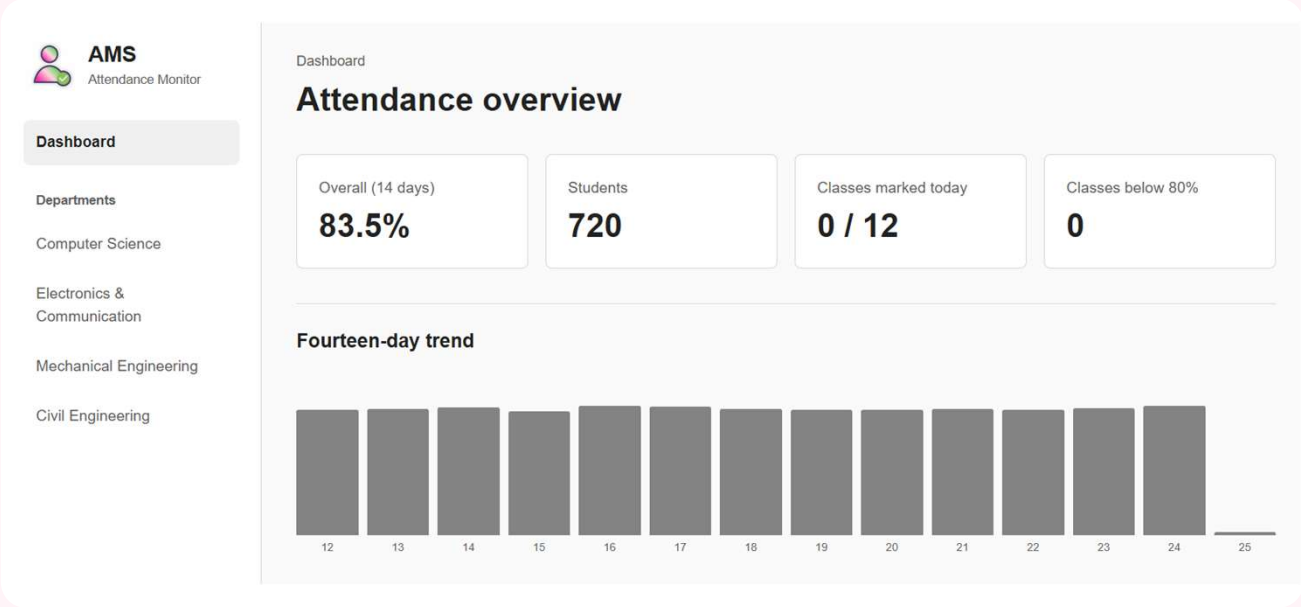

AI-powered insights

Risk alerts, summaries, notes and CSV export

720 students | 4 departments | 12 classes

https://lovable.dev/preview/OrKfPnSIOT4iwG70L46sx2hvHL3lEInJ

Attendance Overview

83.5%
14-day overall

720
Students

0 / 12
Marked today

0
Below 80%

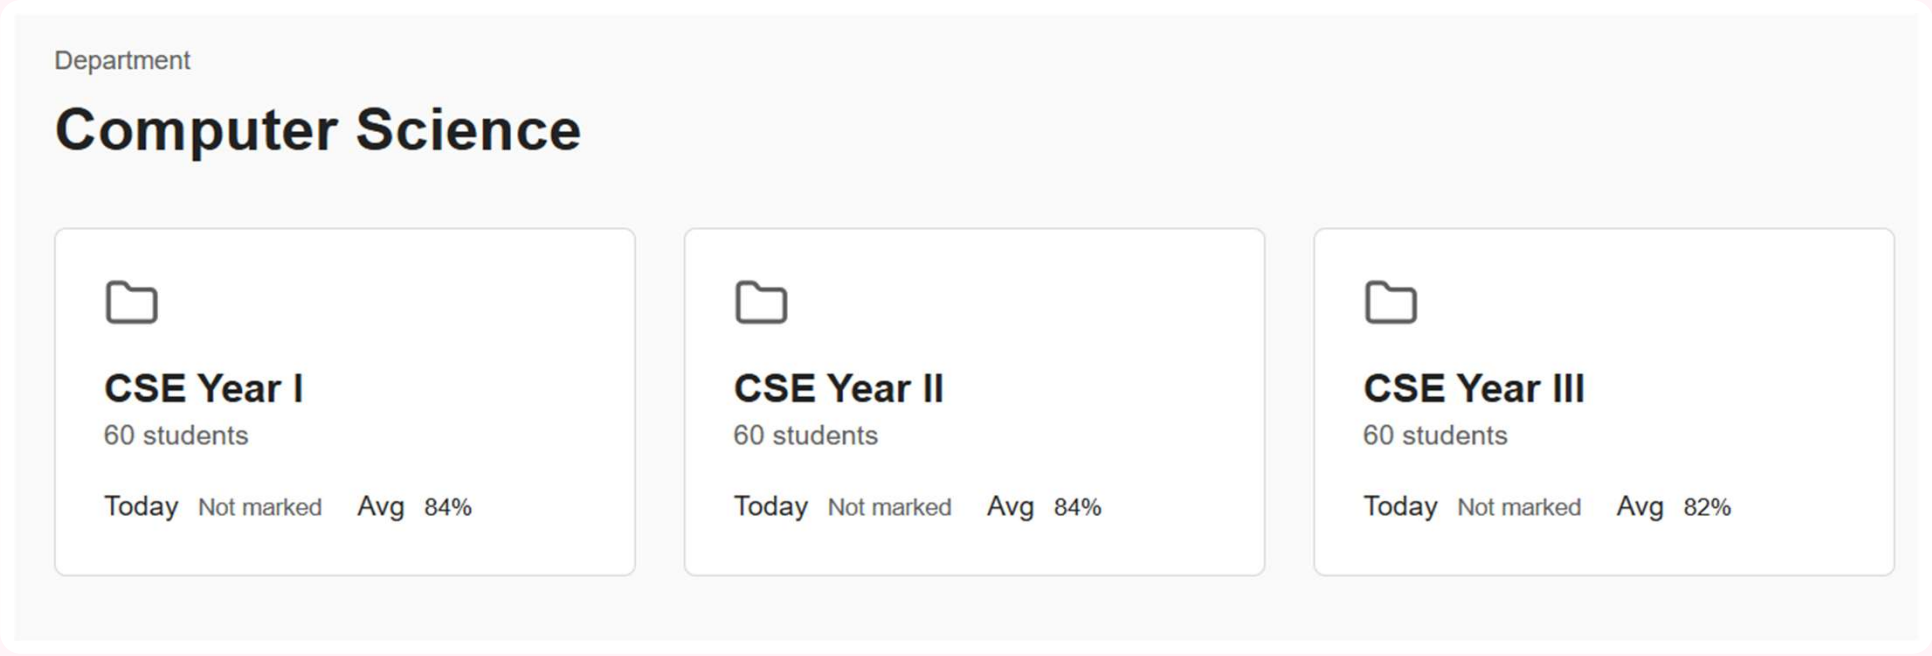

Overall attendance
83.5% averaged over the last 14 days.

Fourteen-day trend
Daily bars for all departments combined; today stays empty until marked.

Live marking tracker
Shows classes marked today and classes below 80%.

Sidebar navigation
Jump to Computer Science, Electronics, Mechanical or Civil.

Departments & Classes

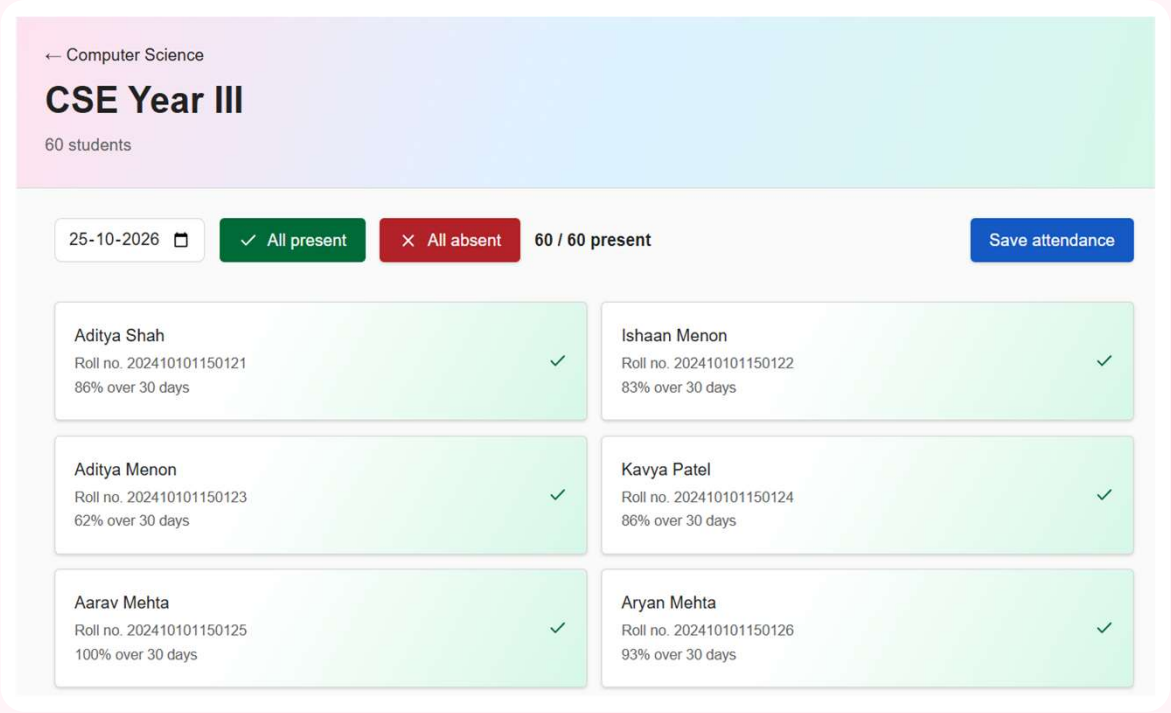

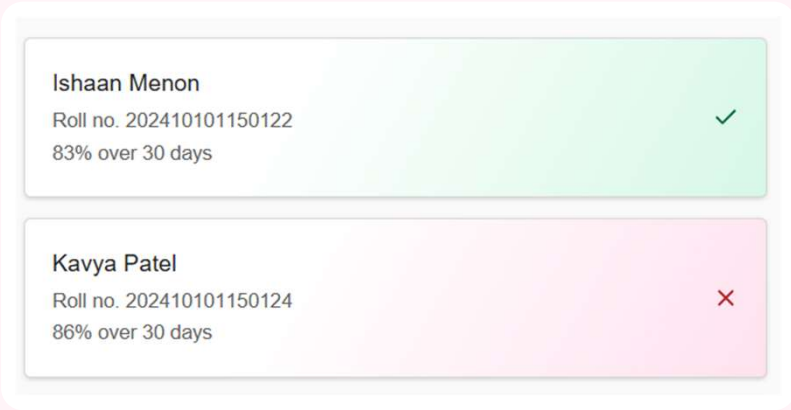

Stored in PostgreSQL
Relational DBMS holds all records

3 classes x 60 students
180 students in this department

Average attendance
84% | 84% | 82%

Student List & Quick Marking

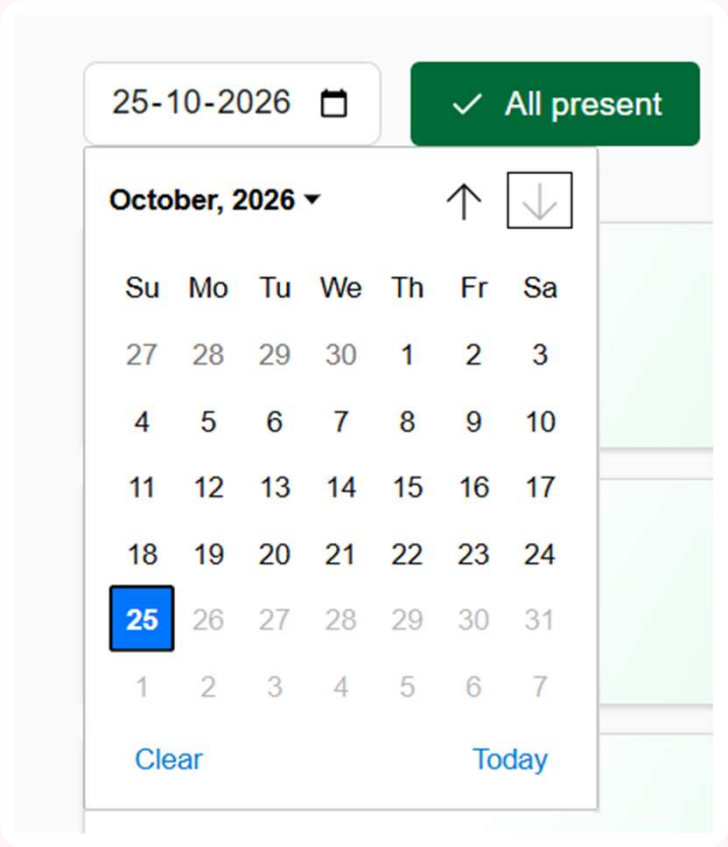

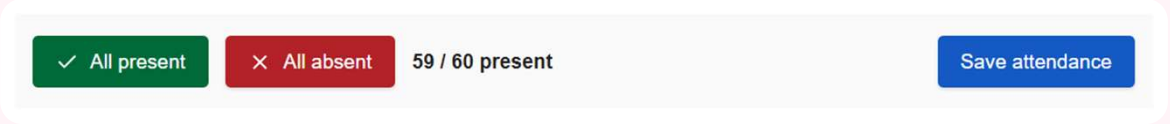

Every student at a glance
Each card shows name, roll no. and 30-day attendance %.

Click once: absent
The card turns red and the present count drops.

Click again: present
Back to green. No reload needed, so mistakes are easy to undo.

Calendar & Quick Actions

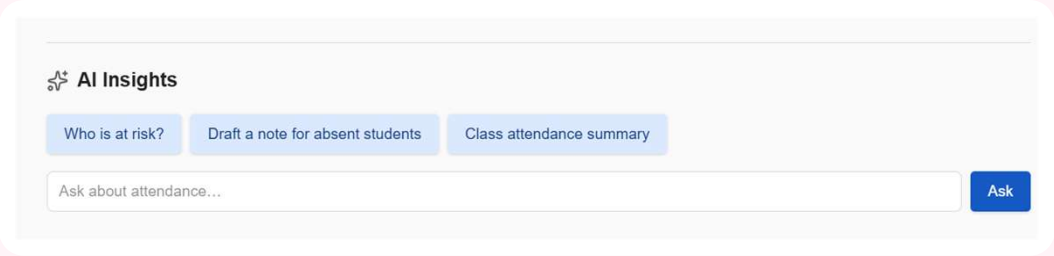

Date picker
Pick any date; Today and Clear shortcuts are built in.

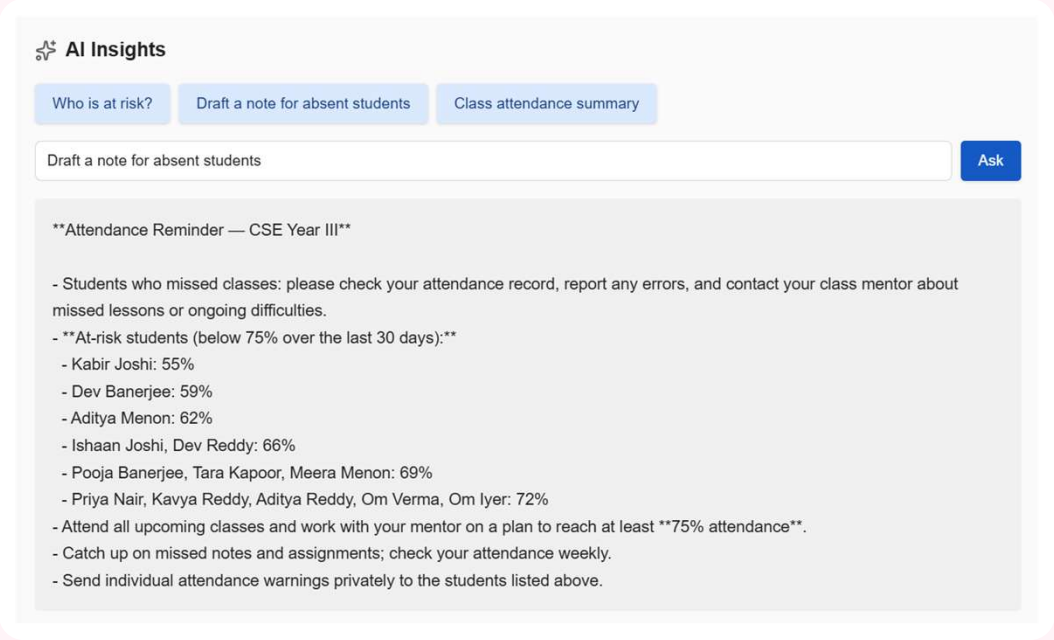

All present / All absent
Mark the whole class in one click, then fix exceptions.

Live counter
Shows how many are present, for example 59 / 60.

Save attendance
Stores the day's record to the database.

AI Insights & CSV Export

Who is at risk?
Lists students below the 75% threshold with their 30-day %.

Draft a note for absent students
Generates a ready-to-send reminder for the class.

Class attendance summary
One-click overview of how the class is doing.

Ask anything
Type a free-text question about attendance and press Ask.

Export to CSV
All attendance data is fully exportable.
